BASES OF A METHOD OF EVALUATING SUBLIMATION CONDENSERS (Osnovy Metoda Rascheta Sublimatsionnykh Kondensatorov). June 61 [11]p. 7 refs. RTS 1770.

DESCRIPTORS: *Steam condensers, Condensation, Vacuum apparatus, *Sublimation, Freezing, Ice, Water vapor, Design, Tests, *Laboratory equipment.

Condensation of vapor into solid state under vacuum (at pressures below the triple point) is characterized by a mobile condensate boundary, i.e., continuous growth of the solid condensate film on the surface. The vapor is directly transformed into a solid, by-passing the fluid state. Henceforth we will call those vessels in which this process takes place sublimation condensers.
